

ISS 2026 AI Hackathon Track 2: AI-Assisted Clinical Documentation Problem Statement

Background

Clinical documentation is essential but time-consuming. Artificial intelligence and natural language processing can assist clinicians by converting conversations into structured documentation.

Challenge

Develop an AI solution that transforms doctor–patient consultation transcripts into structured clinical documentation such as SOAP notes, diagnoses, ICD-10 codes, and treatment recommendations.

Dataset

NaClinDoc-500 contains synthetic Nigerian consultation transcripts with linked annotations, patient metadata, encounter metadata, and structured clinical outputs.

Expected Deliverables

Submit a public GitHub repository, technical report (maximum five pages), presentation slides, and a demonstration video (maximum five minutes).

Evaluation Focus

Solutions will be evaluated on NLP performance, clinical accuracy, explainability, innovation, and presentation quality.
